1 Message Set Overview

Introduction

This document describes the Payments Mandates message set. It includes the new version of the MessageDefinitions that have been added as part of the maintenance cycle 2023-2024 (See MCR #234) and approved by the Payments Standards Evaluation Group on 08 January 2024.

1.1 List of MessageDefinitions

The following table lists all MessageDefinitions described in this book.

MessageDefinition	Definition
pain.009.001.08 MandateInitiationRequestV08	<p>The MandateInitiationRequest message is sent by the initiator of the request to his agent. The initiator can either be the debtor or the creditor.</p> <p>The MandateInitiationRequest message is forwarded by the agent of the initiator to the agent of the counterparty.</p> <p>The MandateInitiationRequest message is used to setup the instruction that allows the debtor agent to accept instructions from the creditor, through the creditor agent, to debit the account of the debtor.</p>
pain.010.001.08 MandateAmendmentRequestV08	<p>The MandateAmendmentRequest message is sent by the initiator of the request to his agent and/or counterparty. The initiator can both be the debtor or the creditor (or where appropriate the debtor agent).</p> <p>The MandateAmendmentRequest message is forwarded by the agent of the initiator to the agent of the counterparty.</p> <p>A MandateAmendmentRequest message is used to request the amendment of specific information in an existing mandate. The MandateAmendmentRequest message must reflect the new data of the element(s) to be amended and at a minimum a unique reference to the existing mandate. If accepted, this MandateAmendmentRequest message together with the MandateAcceptanceReport message confirming the acceptance will be considered as a valid amendment on an existing mandate, agreed upon by all parties. The amended mandate will from then on be considered the valid mandate.</p>
pain.011.001.08 MandateCancellationRequestV08	<p>The MandateCancellationRequest message is sent by the initiator of the request to his agent. The initiator can either be the debtor or the creditor.</p> <p>The MandateCancellationRequest message is forwarded by the agent of the initiator to the agent of the counterparty.</p> <p>A MandateCancellationRequest message is used to request the cancellation of an existing mandate. If accepted, this MandateCancellationRequest message together with the MandateAcceptanceReport message confirming the acceptance will be considered a valid</p>

MessageDefinition	Definition
	cancellation of an existing mandate, agreed upon by all parties.
<p>pain.012.001.08 MandateAcceptanceReportV08</p>	<p>The MandateAcceptanceReport message is sent from the agent of the receiver (debtor or creditor) of the MandateRequest message (initiation, amendment or cancellation) to the agent of the initiator of the MandateRequest message (debtor or creditor).</p> <p>A MandateAcceptanceReport message is used to confirm the acceptance or rejection of a MandateRequest message. Where acceptance is part of the full process flow, a MandateRequest message only becomes valid after a confirmation of acceptance is received through a MandateAcceptanceReport message from the agent of the receiver.</p>
<p>pain.017.001.04 MandateCopyRequestV04</p>	<p>The MandateCopyRequest message is sent by the initiator of the request to his agent. The initiator can either be the debtor or the creditor.</p> <p>The MandateCopyRequest message is forwarded by the agent of the initiator to the agent of the counterparty.</p> <p>A MandateCopyRequest message is used to request a copy of an existing mandate. If accepted, the mandate copy can be sent using the MandateAcceptanceReport message.</p>
<p>pain.018.001.04 MandateSuspensionRequestV04</p>	<p>The MandateSuspensionRequest message is sent by the initiator of the request to its agent. The initiator can either be the debtor, debtor agent, creditor or creditor agent.</p> <p>A MandateSuspensionRequest message is used to request the suspension of an existing mandate until the suspension is lifted.</p>

2 **pain.009.001.08 MandateInitiationRequestV08**

2.1 **MessageDefinition Functionality**

Scope

The MandateInitiationRequest message is sent by the initiator of the request to his agent. The initiator can either be the debtor or the creditor.

The MandateInitiationRequest message is forwarded by the agent of the initiator to the agent of the counterparty.

The MandateInitiationRequest message is used to setup the instruction that allows the debtor agent to accept instructions from the creditor, through the creditor agent, to debit the account of the debtor.

Usage

The MandateInitiationRequest message can contain one or more request(s) to setup a specific mandate.

The messages can be exchanged between creditor and creditor agent or debtor and debtor agent and between creditor agent and debtor agent.

The message can also be used by an initiating party that has authority to send the message on behalf of the creditor or debtor.

The MandateInitiationRequest message can be used in domestic and cross-border scenarios.

Outline

The MandateInitiationRequestV08 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. GroupHeader

Set of characteristics to identify the message and parties playing a role in the mandate initiation, but which are not part of the mandate.

B. Mandate

Set of elements used to provide the details of the mandate signed between the (ultimate) creditor and the (ultimate) debtor.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

2.3 Constraints

C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

C3 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C4 BICFI

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

C5 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C6 CurrencyAmount

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

C7 IBAN

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

C8 IdentificationAndProxyGuideline

If the account identification is not defined through a conventional identification such as an email address or a mobile number, then the proxy element should be used for the identification of the account.

C9 IdentificationOrProxyPresenceRule

Identification must be present or Proxy must be present. Both may be present.

C10 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C11 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

C12 UltimateCreditorGuideline

UltimateCreditor may only be present if different from Creditor.

C13 UltimateDebtorGuideline

UltimateDebtor may only be present if different from Debtor.

MandateAmendmentRequestV08

3.1 **MessageDefinition Functionality**

Scope

The MandateAmendmentRequest message is sent by the initiator of the request to his agent and/or counterparty. The initiator can both be the debtor or the creditor (or where appropriate the debtor agent).

The MandateAmendmentRequest message is forwarded by the agent of the initiator to the agent of the counterparty.

A MandateAmendmentRequest message is used to request the amendment of specific information in an existing mandate. The MandateAmendmentRequest message must reflect the new data of the element(s) to be amended and at a minimum a unique reference to the existing mandate. If accepted, this MandateAmendmentRequest message together with the MandateAcceptanceReport message confirming the acceptance will be considered as a valid amendment on an existing mandate, agreed upon by all parties. The amended mandate will from then on be considered the valid mandate.

Usage

The MandateAmendmentRequest message can contain one or more request(s) to amend a specific mandate.

The messages can be exchanged between creditor and creditor agent or debtor and debtor agent and between creditor agent and debtor agent.

The message can also be used by an initiating party that has authority to send the message on behalf of the creditor or debtor.

The MandateAmendmentRequest message can be used in domestic and cross-border scenarios.

If all elements in the existing Mandate need to be amended or the underlying contract is different, then the MandateAmendmentRequest message should not be used. The existing Mandate has to be cancelled and a new Mandate has to be initiated.

Outline

The MandateAmendmentRequestV08 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. GroupHeader

Set of characteristics to identify the message and parties playing a role in the amendment of the mandate, but which are not part of the mandate.

B. UnderlyingAmendmentDetails

Set of elements used to provide details on the amendment request.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

3.3 Constraints

C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

C3 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C4 BICFI

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

C5 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C6 CurrencyAmount

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

C7 CurrencyAmount

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

C8 IBAN

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

C9 IdentificationAndProxyGuideline

If the account identification is not defined through a conventional identification such as an email address or a mobile number, then the proxy element should be used for the identification of the account.

C10 IdentificationOrProxyPresenceRule

Identification must be present or Proxy must be present. Both may be present.

C11 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C12 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

C13 UltimateCreditorGuideline

UltimateCreditor may only be present if different from Creditor.

C14 UltimateCreditorGuideline

UltimateCreditor may only be present if different from Creditor.

C15 UltimateDebtorGuideline

UltimateDebtor may only be present if different from Debtor.

C16 UltimateDebtorGuideline

UltimateDebtor may only be present if different from Debtor.

4 **pain.011.001.08** **MandateCancellationRequestV08**

4.1 **MessageDefinition Functionality**

Scope

The MandateCancellationRequest message is sent by the initiator of the request to his agent. The initiator can either be the debtor or the creditor.

The MandateCancellationRequest message is forwarded by the agent of the initiator to the agent of the counterparty.

A MandateCancellationRequest message is used to request the cancellation of an existing mandate. If accepted, this MandateCancellationRequest message together with the MandateAcceptanceReport message confirming the acceptance will be considered a valid cancellation of an existing mandate, agreed upon by all parties.

Usage

The MandateCancellationRequest message can contain one or more request(s) to cancel a specific mandate.

The messages can be exchanged between creditor and creditor agent or debtor and debtor agent and between creditor agent and debtor agent.

The message can also be used by an initiating party that has authority to send the message on behalf of the creditor or debtor.

The MandateCancellationRequest message can be used in domestic and cross-border scenarios.

Outline

The MandateCancellationRequestV08 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. GroupHeader

Set of characteristics to identify the message and parties playing a role in the cancellation of the mandate, but which are not part of the mandate.

B. UnderlyingCancellationDetails

Set of elements used to provide details on the cancellation request.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

C11 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C12 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

5 **pain.012.001.08** **MandateAcceptanceReportV08**

5.1 **MessageDefinition Functionality**

Scope

The MandateAcceptanceReport message is sent from the agent of the receiver (debtor or creditor) of the MandateRequest message (initiation, amendment or cancellation) to the agent of the initiator of the MandateRequest message (debtor or creditor).

A MandateAcceptanceReport message is used to confirm the acceptance or rejection of a MandateRequest message. Where acceptance is part of the full process flow, a MandateRequest message only becomes valid after a confirmation of acceptance is received through a MandateAcceptanceReport message from the agent of the receiver.

Usage

The MandateAcceptanceReport message can contain one or more confirmation(s) of acceptance or rejection of a specific Mandate Request.

The messages can be exchanged between debtor agent and creditor agent and between debtor agent and debtor and creditor agent and creditor.

The MandateAcceptanceReport message can be used in domestic and cross-border scenarios.

Outline

The MandateAcceptanceReportV08 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. GroupHeader

Set of characteristics to identify the message and parties playing a role in the mandate acceptance, but which are not part of the mandate.

B. UnderlyingAcceptanceDetails

Provides information on the acceptance or rejection of the mandate request.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

5.3 Constraints

C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

C3 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C4 BICFI

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

C5 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C6 CurrencyAmount

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

C7 CurrencyAmount

Note: The decimal separator is a dot.

C8 IBAN

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

C11 OriginalMandateldentificationPresenceRule

When AcceptanceResults/Accepted is "true" then OriginalMandate/
OriginalMandateldentification must be present or OriginalMandate/OriginalMandate/
OriginalMandateldentification must be present.

C12 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C13 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

C14 UltimateCreditorGuideline

6 **pain.017.001.04** **MandateCopyRequestV04**

6.1 **MessageDefinition Functionality**

Scope

The MandateCopyRequest message is sent by the initiator of the request to his agent. The initiator can either be the debtor or the creditor.

The MandateCopyRequest message is forwarded by the agent of the initiator to the agent of the counterparty.

A MandateCopyRequest message is used to request a copy of an existing mandate. If accepted, the mandate copy can be sent using the MandateAcceptanceReport message.

Usage

The MandateCopyRequest message can contain one or more copy requests.

The messages can be exchanged between creditor and creditor agent or debtor and debtor agent and between creditor agent and debtor agent.

The message can also be used by an initiating party that has authority to send the message on behalf of the creditor or debtor.

The MandateCopyRequest message can be used in domestic and cross-border scenarios.

Outline

The MandateCopyRequestV04 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. GroupHeader

Set of characteristics to identify the message and parties playing a role in the mandate copy request, but which are not part of the mandate.

B. UnderlyingCopyRequestDetails

Set of information used to identify the mandate for which a copy is requested.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

6.3 Constraints

C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

C3 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C4 BICFI

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

C7 CurrencyAmount

C10 IdentificationOrProxyPresenceRule

Identification must be present or Proxy must be present. Both may be present.

C11 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C12 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

C13 UltimateCreditorGuideline

UltimateCreditor may only be present if different from Creditor.

7 **pain.018.001.04** **MandateSuspensionRequestV04**

7.1 **MessageDefinition Functionality**

Scope

The MandateSuspensionRequest message is sent by the initiator of the request to its agent. The initiator can either be the debtor, debtor agent, creditor or creditor agent.

The messages can be exchanged between creditor and creditor agent or debtor and debtor agent and between creditor agent and debtor agent.

The MandateSuspensionRequest message can be used in domestic and cross-border scenarios.

Outline

The MandateSuspensionRequestV04 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. **GroupHeader**

Set of characteristics to identify the message and parties playing a role in the mandate suspension request, but which are not part of the mandate.

B. **UnderlyingSuspensionDetails**

Set of elements used to provide information on the suspension request of the mandate.

C. **SupplementaryData**

Additional information that cannot be captured in the structured elements and/or any other specific block.

Identification must be present or Proxy must be present. Both may be present.

C11 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C12 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.
